

1. In the main office at each school (2) you have requested that each of the (2) office admins have the ability to see the cameras and have a camera pop up with visual notification if a door is forced or propped. Do you want this to occur on their desktop PC or would Newmarket Schools prefer a separate monitor to be wall mounted for each office administrator?

On their desktop PC please. The desktop PC are how they currently monitor the cameras. The wall mounted monitor is used for outside camera views.

2. For the additional camera at the High School, Newmarket Schools would like to have a multisensor camera installed?

I believe a multi sensor camera would best fit the need. That would allow us to view peoples faces as they both enter and exit via that door.
